WATER QUALITY EMERGENCY NOTIFICATION PLAN

The California Health and Safety Code, Section 4029, requires that every water system that supplies water to a user for domestic purposes submit an emergency notification plan to the local health authority. This plan is to be implemented whenever the health authority determines that your water supply fails to meet water quality standards and represents an immediate danger to the health of user. It is recommended that this same plan be used for water outages and rationing resulting from natural or man-made disasters.

For systems serving fewer than 15 customers, we recommend that the means of notification of customers be by door-to-door contact or written handout sheets.

Please acknowledge your concurrence and acceptance with this means of notification. If you agree to notify customers by door-to-door contact or written hand out sheets, check the "Standard Plan" section of the form. If you propose to use some other-method, complete the "Alternate Plan" section of this form.

ALTERNATE PLAN: I propose to notify my water consumers by the following method. We live on 2 ½ acre lots with locked gates and dogs. We communicate via phone, text, group text and email depending on the situation. If necessary Jim and I will drive door-to-door making sure everyone is aware of an emergency.

The following persons have been designated to implement the plan upon notification by the Environmental Health Service Division that an imminent danger to the health of the water consumer exists.
